

In February 2016, Brentwood Borough commenced utilization of the Novus Agenda meeting management tool. This web-based software allows the Borough to reduce its environmental impact through the elimination of paper meeting materials. The program concurrently permits the municipality to increase transparency, as citizens now have electronic access to pending legislation and associated supporting documents. Effective January 2017, the Borough will no longer post departmental reports on its website. Interested individuals can view these items by selecting the "Council Meeting Agendas" option from the homepage and clicking on the Agenda Meeting for the respective month. PDF documents are attached to a monthly motion by which Council formally ratifies these reports.
